

The page features a decorative arrangement of six circles. Three solid grey circles are positioned in the top row, and three hollow circles with a thin grey outline are in the bottom row. The text is centered between these two rows.

Arctic Wolves!

By Sophie Hammond

Introduction!

I wrote about the Arctic Wolves because they sound really interesting and I wanted to let people know what they are really like, what they eat all the information and nearly everything you know!

Information about the Arctic Wolf!

- The shoulder height of the Arctic Wolf varies from 25 to 31 inches. On average, they are about 3 feet tall from head to toe.
- They come in the colours of Red, Grey, White and Black.
- They live in the Arctic.
- They eat lemmings and the arctic hare and also they eat musk oxen and caribou.

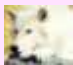

A Picture of an Arctic Wolf!

More Information!

-  The Arctic Wolves are bred alive.
-  When the baby Arctic Wolves are old enough they start to catch and eat meat!
-  They don't eat anything but meat they catch anything near them, they sneak up on the prey and then kill them. It doesn't matter what it is they'll have a go to try and eat the animal!

Habitats!

-  Arctic Wolves live in the Arctic where their food usually is.
-  Some people say that they usually find their food, but they catch it because the Arctic Wolf is one of the most dangerous dogs there can ever be!
-  The Wolves usually live in packs or family groups consisting of a breeding pair!

Appearance!

 Arctic Wolves look like big dogs and more fearless than dogs.

 They aren't really scared of anything they would just try to eat it if it came close!
