

# Sharks

By Bradley

# Fact for teeth

- Most sharks have At least three rows Of teeth. As they lose the ones in front, teeth from the rows behind move forward to replace them.

# Fins

- A great white Shark's fins are sharp and triangular.

# Sharks mouths

■ Great white shark  
kill their prey by  
biting it. They can  
open their mouths  
very wide

# Sharks mouths

■ As their mouths open, their teeth point forward, helping them to take a bigger bite.
